| Sydney, Australia | jjh44728@gmail.com | <https://www.linkedin.com/in/jungho-jang-271b95166/>

Professional Statement

Master of Information Technology graduate from the University of Technology Sydney with hands-on experience developing web, mobile and cloud-based applications through academic projects. Transitioned from a Mechanical Engineering background with a strong interest in automation and software-driven solutions. Brings strong problem-solving, communication, stakeholder collaboration, adaptability and persistence developed through professional engineering experience. A fast learner with a strong work ethic and genuine passion for software development, seeking a Graduate or Junior Software Engineer position to contribute to a team and continue growing as a software developer.

Technical Skills

Programming: Java, Python, JavaScript, PHP, Swift, C#

Web & Mobile: HTML5, CSS3, React.js, RESTful APIs, SwiftUI, MVVM

Cloud & Database: AWS, MySQL, SQLite, SQL

Tools & Practices: Git, GitHub, Xcode, VS Code, OOP, Agile, Scrum, Testing, Debugging

Projects

Car Rental Web Application

- Developed a full-stack vehicle rental platform with RESTful APIs, database integration and cloud deployment.
- Implemented search, filtering and CRUD functionality and deployed the application on AWS
- Used GitHub for version control, testing and collaborative development.

QR Payment Mobile Application

- Developed an iOS payment application with QR code scanning and a structured MVVM architecture.
- Implemented reusable UI components and integrated camera-based QR scanning functionality.
- Used GitHub for version control, testing and collaborative development.

Family Finance Management Application

- Developed a student enrollment management system for managing student, course and enrollment information
- Implemented database functionality and CRUD operations for efficient data management.
- Collaborated with team members on architecture, feature development, testing and debugging.

Student Enrollment Management System

- Developed a desktop financial management application to help families track income, expenses, budgets, and account information.
- Implemented database functionality and CRUD operations for efficient data management.
- Applied object-oriented programming and testing practices to improve system reliability.

Bubble Pop iOS Game

- Developed an interactive iOS game with dynamic gameplay and user interaction.
- Applied MVVM architecture and optimized application performance through testing and debugging.
- Used GitHub for version control and iterative development.

Professional Experience

Warrikal | Mechanical Rigger

Perth, Australia | Oct 2024 - Present

- Calculated load weights and selected appropriate rigging equipment, lifting methods and attachment points to safely position heavy structures and components.
- Applied problem-solving and adaptability to resolve operational issues in demanding work environments.

Linkforce | Mechanical Rigger

Perth, Australia | Jan 2023 – Oct 2024

- Supported fixed plant maintenance and shutdown projects involving heavy equipment and machinery.
- Assessed load weights and selected appropriate rigging equipment and lifting methods for heavy structures and components.

KD Navien | Mechanical Engineer

Seoul, South Korea | Aug 2021 – Aug 2022

- Applied engineering analysis and problem-solving while collaborating with cross-functional teams and stakeholders.
- Designed boiler and heating systems based on customer requirements, proposed tailored technical solutions, and supported project management from design through implementation.

KTS Singapore | Field Service Engineer

Singapore | May 2019 – May 2020

- Managed and optimized crane automation systems to improve operational efficiency, system performance and recognition accuracy in field environments.
- Coordinated the transition from manual to automated crane systems, working with customers and technical teams to manage project implementation, testing and system improvements.

Education

Master of Information Technology – Enterprise Software Development

University of Technology Sydney (UTS) | 2024–2026

Relevant Coursework:

Software Engineering · Cloud Computing · Software Architecture · Database Systems · Mobile Application Development · Data Structures & Algorithms

Bachelor of Engineering – Mechanical Engineering

Korea Maritime and Ocean University(KMOU) | 2016–2019

Relevant Coursework:

Automatic Control · Programming Language · Digital Circuit · Numerical Analysis · Introduction to Engineering Design · 3D CAD & Design
